

CORSTON

ARCHITECTURAL DETAIL

Multiway Dimmer Switch

Bronze 39249

Using our components, you can create any combination of switches or sockets that you need.

This bronze rotary dimmer switch works with our Kew and Grove switch plates. It has a collar underneath the rotating knob that hides all the working parts.

This multiway version lets you dim a lighting circuit from multiple points in a room, using as many controls as you like.

Our dimmers also won't flicker or buzz when you use them with a suitable bulb, and you can set the minimum bulb brightness.

Bronze is our boldest finish, but it isn't shiny or bright, so it has a subtle side to it too. It's a deep matt brown colour that's almost black in some lights.

• Switch and collar made from solid brass

• Suitable for trailing edge mode only

• Compatible with Kew and Grove switch plates

• Must be used with our bronze-finished (or clear or paintable) plates

- Switches rated to 16A
- 230-250V~50Hz
- Must be used with other multiway dimmers
- Cannot be used in conjunction with standard two-way switches (toggle or rocker) or other switches
