# Colour Guide

## Cast Metal Cisterns Available Colours:

Notes: The letters and outline of the cartouche are supplied powder coated to match the cistern. They can be painted on site to your own requirements.

All our cast metal cisterns are supplied with a plastic liner to help reduce condensation and noise.

## Pottery (Toilets and Cisterns etc.) Available Colours:

## Fireclay Basin Colours (inc White)

Notes: Not all pottery is available in every colour. Please check individual products for details.

## Woodwork (Seats and Pattresses) Available Colours:

Notes: Throne seats are not available in Black.

## Metalwork (Taps, Flushpipes etc.) Available Colours:

Notes: All our Polished Brass, Brushed Brass and Brushed is 'Live', i.e. not lacquered. This means that it will need cleaning from time to time to maintain its lustre.

## Cast metal cisterns and brackets

We are proud that all our metal brackets and cisterns are cast by hand, they are not machine made. This means that on occasion there will be surface marks or imperfections, our brackets and cisterns are then polished by hand and most of these surface marks will be removed. We consider these to be part of the beauty and authenticity of our products, and as such we ask for your understanding of the hand-made nature of the products.

NEW for 2022, we have introduced a service to offer our 814 cast metal cisterns in any RAL colour, as a special order service, adding to your bespoke option choices.

Note:  
Indigo Blue - the closest RAL is 5003 matt.  
Forest Green - the closest RAL is 6028 matt.

In association with Just One Tree, we commit to plant a tree for every wooden seat we sell.

## Warranties and General Product Notes (UK and Ireland)

All guarantees offered here are subject to the products being installed, maintained and cleaned in accordance with our guidelines.

If products are not installed, maintained or cleaned in this manner any guarantees may be rendered invalid. We strongly recommend that you use an experienced plumber, ideally one who is a member of a recognised trade body for the installation of your new Thomas Crapper products.

### Vitreous China (Pottery).

Vitreous china is an extremely durable, non-porous material; however, it is also a brittle material and should not be subjected to undue stress. Particular care should be taken when fitting basin waste fittings, taps and the screws for WC Pans. Thomas Crapper and Company pottery carries a 25-year guarantee against failures caused by manufacturing defects.

### Taps and Showers.

Thomas Crapper taps carry a 10-year mechanical guarantee against manufacturing defects. This guarantee excludes plated or polished surfaces and replaceable parts that are subject to normal use and wear such as washers, ceramic discs etc.

Our showers have a 2-year mechanical guarantee against manufacturing faults in material and workmanship.

### Furniture.

Thomas Crapper bathroom furniture is manufactured from a combination of solid and veneered wood panels and frames. Whilst every care is taken in the manufacture of this furniture, due to the nature of the products there may be slight variations in grain pattern and colour between individual pieces, this is considered part of the appeal of natural timber. Our furniture products are guaranteed against manufacturing defects for a period of 2-years.

### Basin stands.

Basin stands are guaranteed against manufacturing defect for a period of 5-years, this guarantee excludes plated or polished finishes.

### Seats.

Thomas Crapper toilet seats are carefully manufactured from solid timber, which is then lacquered for protection, however water should not be allowed to remain on the seat for any length of time. As timber is a natural product some variation in grain a colour may occur between individual pieces. Our toilet seats are guaranteed against manufacturing defect for a period of 2-years.

**NB: Please ensure the WC pan is installed level. If the WC pan is not level, it may cause the seat to split, this is NOT a manufacturing fault.**

### Cistern fittings.

All Thomas Crapper WC pans and cisterns are designed to flush at 6 litres in accordance with the required standards. Cisterns are supplied with the appropriate flushing valves, levers and flush pipes to ensure optimum performance. We cannot accept any responsibility for product performance where products have been badly installed or substitutions have been made. Cistern fittings are guaranteed against manufacturing defect for a period of 2-years.

## General Installation Instructions

Thomas Crapper products are manufactured to the highest standards, with each piece subject to many quality control steps throughout the manufacturing process. Vitreous china manufacturing is a craft, not a machine finished process; this means that some variation may occur between individual pieces of sanitaryware, this is perfectly normal and within the accepted industry quality parameters. Please see below some important notes on particular details regarding the installation of our products.

### Screws.

We supply BRASS or STAINLESS STEEL slotted-head screws, which cannot rust, with our products. Modern, cross-head screws should not be used, as most cross-head screws are made of ordinary steel; they will corrode over time (even if they are zinc plated) and damage can be caused to the product. This applies even to screws that are out of sight; for example, inside the cistern.

### Inlet valve.

The cistern inlet valve must be adjusted so that the cistern fills to the water line, marked 'WL' or Water Line inside, this is to ensure that the cistern meets water regulations.

### Brackets.

The brackets for our cisterns, basins and seats are 'handed', that is, one is made to be seen from the left, while the other is cast to be viewed from the right. Please ensure that they have been installed correctly.

### Water-flow restrictor.

A water-flow restrictor is supplied in the flushing fitting pack of the high-level cisterns. This plastic disc (with a hole in the centre) should be fitted into the inlet hole of the WC pan before fitting the translucent 'finned' internal connector, which is supplied with the WC.

## General Care Instructions

We suggest that all Thomas Crapper & Co Ltd. products are installed in compliance with current Water Regulations by a qualified plumber, preferably one who is registered with a recognised trade body.

### Vitreous china items (pottery).

These should be cleaned using a mild cream cleaner, it should be applied using sponge or damp cloth, then rinsed thoroughly using clean water. Do not use abrasive or highly caustic cleaners (e.g. Mr Muscle). We recommend that you do not place bleach or water colouring blocks inside the cisterns.

### Nickel and Chrome plated items.

Plated items should be cleaned using warm, soapy water, then dried with a soft cloth. Occasionally, a non-abrasive brass or chrome polish can be used if necessary to remove stubborn stains. Please do not use bleach, de-scaling solutions or abrasive cleaning products as these may damage the plated surface.

### Polished Brass items.

These products are made of solid brass, which is hand-polished. No lacquer or plating has been applied. This finish will need regular polishing to maintain its lustrous shine. We suggest the use of a proprietary brass polish, such as Brasso.

### Wooden items.

Products such as wooden seats should be cleaned with a mild antibacterial liquid on a damp cloth. The seat should be dried with a separate dry cloth. Please do not soak or use bleach. Splashes or condensation should be wiped from the surface as soon as possible. Once fully dry after cleaning, the seat can be polished with a non-silicone wax.

## Painting Instructions.

814 Cast Metal Cisterns (Primed ready for painting).

We suggest that you begin with an oil-based under-coat, followed by one or two applications of an oil-based top-coat. We recommend 'eggshell' or 'satin' finish, but gloss can also be used if preferred. Several coats applied with a brush looks more traditional if you require an authentic finish.

Please ensure that the underside of the cistern lid is also painted, together with the inside of the cistern body to a depth of appx. 100mm, from the top.

Please Note: If you use water-based paint, you may have to apply several coats. This is because the water in the paint can cause oxidisation of the cast iron brackets and brown stains may appear in the paint. This should do no harm and once dry the water-based paint will cause no further rusting but you may have to apply several coats to cover the brown patches.

### Picking-out the letters on the front of the body.

It is not essential to paint the letters on the front of the cistern as they are cast to stand proud of the cistern body and are usually quite legible. If desired, however the letters can be highlighted by painting in a contrasting colour. We have found the best results from using cellulose paint pens, available to buy from most major stationers, online or from our offices (Telephone +44 (0) 1789 450522).

### General.

If possible, paint everything before installation, this allows all surfaces to be painted (whether seen or not).

For the unfinished wooden pattresses we suggest that you apply a primer, then undercoat and then one coat of the final colour. Once installed we recommend that you apply a second coat of the final colour in-situ. This allows any screw heads etc. to be matched to the paintwork, if necessary.
