(52.5)

Celebrating over 50 years of making business a pleasure

Yeoman Rainguard has been providing quality Rainwater Systems for over 50 years.

We pride ourselves on the quality of workmanship, products and attention to detail, which are underpinned by our many years experience in this area.

Our expertise is freely available and we are happy to discuss any project in detail from initial concepts for new developments to full surveys for existing projects or refurbishments. Our ability to best fit our products to the project means we can tailor specifications to suit both client and budget requirements.

Over the years we have supplied our products to many different types of projects ranging from listed buildings, churches and civic properties to new build housing developments, self build and commercial/retail projects.

Our reputation has been built on delivering quality products and offering a friendly, helpful and above all, personal service.

Our number one priority is you - the customer. We hope to prove that "We make business a pleasure."

SERVICE & SOLUTIONS

We take great pride at Yeoman Rainguard in being able to offer a comprehensive service, before, during and after the supply and fitting of our specialist products.

We will endeavour to meet and exceed the expectations for your project regardless of size, budget or location.

Whether you are an architect, local authority, building contractor, homeowner or self builder, our unique professional services are available free of charge and without obligation.

DESIGN

Our experienced team are able to offer expert advice on specifications in addition to providing product samples, where required, for client consideration and approval.

We can assist in liaison with local planning authorities and also advise on conservation issues.

If the project is at an early stage then we can help with system design and specification, take quantities from project drawings and provide fully itemised quotations.

ONSITE

For renovation or new build projects which are already onsite, we can arrange full site surveys, itemised quotations and provide accurate advice on technical issues including material selection e.g. Aluminium, GRP, Cast Iron, Copper, Zinc and Stainless Steel and help with rainwater calculations and sizing.

As a manufacturer we are able to produce special (non stock) items to suit specific site requirements and also include the replication of existing period design patterns.

MANUFACTURE

Once your exact requirements have been agreed, Yeoman Rainguard products are made at our head office manufacturing facilities in Leeds.

We use only the finest raw materials, latest

state of the art technology and most important of all, our own directly employed skilled craftsmen.

DESPATCH

Orders are despatched using our own fleet of delivery vehicles or by overnight carrier. All products are securely packaged for safe transit and site storage.

INSTALLATION

A welcome addition to our services is onsite installation by one of our nationwide network of approved installation specialists, each having a proven track record with Yeoman Rainguard products.

All are available to work confidently with main contractors and end users alike.

If, however, you choose to fit one of our systems yourself or decide to use a subcontractor, we will provide full installation instructions. Our sales department can offer advice on any aspect of installation.

AFTER SALES

Most of our products are maintenance free, however once your project is complete we are able to offer guidance on suitable methods of cleaning.

Should the unforeseen happen and any item is damaged, then we can supply replacements quickly.

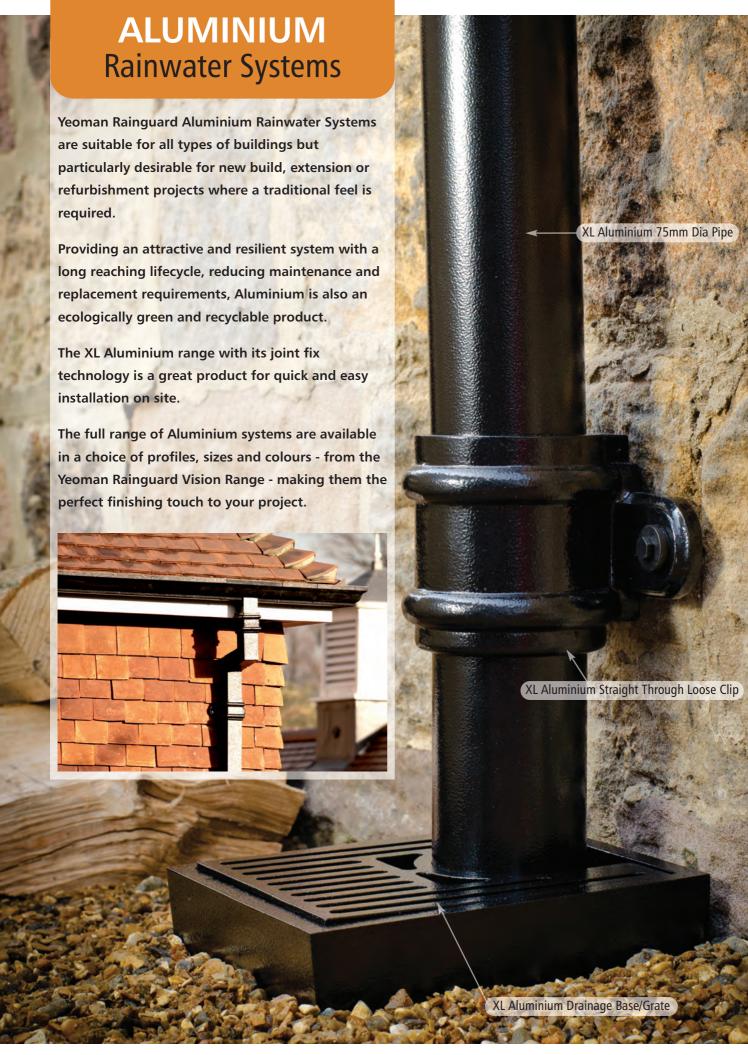

EXPORT SERVICE

With a worldwide distribution network, our export department will be happy to discuss any particular requirement you may have.

SALES HELPLINE

If you would like details on any of our products please contact us on our Sales Helpline:

The XL Aluminium range, complete with Cast Aluminium Rainwater Hoppers, were fitted to a new build development complementing perfectly the stone exterior. The XL joint technology offered a huge advantage in speed and ease of installation on site when fitting to multiple units.

The conversion of a hospital, over 100 years old, into luxury flats was sympathetically carried out. The addition of XL Aluminium downpipes and MOG gutters in Basalt Grey helped to keep the building's heritage look.

Gutters & downpipes from the XL Aluminium range emulated the high quality finish of a unique residence on a grand scale.

XL ALUMINIUM Gutters

Composition Design & Manufacture

Yeoman Rainguard XL Aluminium Gutters are extruded profiles using aluminium alloy to EN AW-6063 T6 BS 12020 - 2:2001

Gutters are designed to be fixed direct to fascia board (with the exception of half round), thus removing the need for facia brackets. However, fascia brackets together with rafter brackets and rise and fall brackets are available if required. Gutter lengths are pre punched at 500mm centres to aid installation.

Gutters are joined using an internal joint clip which does not require any mechanical fixings.

Silicone joint sealant is used to create a long lasting water tight seal.

Shape & Dimensions

Profiles are as detailed and are supplied in standard 3.0m and 2.0m lengths.

Standard Accessories

Running outlets, stop end outlets (handed), 90° external and internal angles, 135° external and internal angles, stop ends (handed), joint clips, fascia brackets, rise and fall brackets, rafter brackets, stainless steel fixing screws, silicone joint sealants, epoxy resins.

Optional Accessories

Non-standard angles, special gutter configurations (made to order), special brackets.

Colours & Finishes

All gutters and accessories are pre finished in black textured polyester powder coating to give years of maintenance free service. Our Vision colour range, including white, is also readily available to order at a small premium (see colour and finishes on pages 66 - 67). Products can also be supplied in standard mill finish.

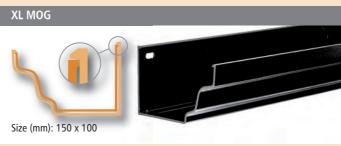

Maintenance

Yeoman Rainguard XL Aluminium gutters require no maintenance other than periodical cleaning out.

Availability

Please contact our Sales Office on 0113 279 5854 for accurate delivery.

XL Aluminium Gutter Accessories (Available in all profiles)

XL ALUMINIUM Pipes

Composition Design & Manufacture

Yeoman Rainguard XL Aluminium Pipes are extruded profiles using aluminium alloy to EN AW-6063 T5 T6 BS EN 12020-2:2001. Pipe collars are die cast.

Shape & Dimensions

Pipes are as detailed and are supplied in standard 3.0m, 2.0m and 1.0m lengths

All lengths come complete with an eared socket (unless otherwise required).

Standard Accessories

1 part top offsets, 2 part top offsets, plinth offsets, side offsets, branches, bends, shoes, square to round connectors, loose sockets with spigot, loose clips, rainwater diverters, timber frame brackets, drainage bases, drainage grates, drainage covers, stainless steel fixing screws, cover caps, wire balloons, bobbins.

Optional Accessories

Access plates, passovers, rodding eyes, decorative ears, special configurations.

Colours & Finishes

All pipes and accessories are pre finished in black textured polyester powder coating to give years of maintenance free service. Our vision colour range is readily available to order at a small premium (see colour & finishes on page 66-67) products can also be supplied in standard mill finish.

Maintenance

Yeoman Rainguard XL Aluminium Pipes require no maintenance other than periodic cleaning.

XL Aluminium Pipe Accessories

All components available in round (as illustrated), square and rectangular. Special sizes are readily available.

Decorative Ears

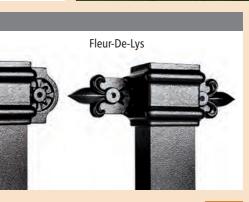

25mm Projection

STANDARD ALUMINIUM Pipes

Composition Design & Manufacture

Extruded sections using aluminium alloy to EN AW-6063 T5 T6 BS EN 12020 - 2:2001. Pipe collars are diecast.

Shape & Dimensions

Supplied in standard 3.0m, 2.0m and 1.0m lengths, all complete with socket.

Standard Accessories

1 part top offsets, 2 part top offsets, plinth offsets, side offsets, branches, bends, shoes, square to round connectors, loose sockets with spigot, loose clips, stainless steel fixing screws, cover caps, wire balloons, bobbins.

Optional Accessories

Special bends and offsets, access plates and rodding eyes to customers requirements.

Colours & Finishes

All pipes are finished in black textured polyester powder coating to give years of maintenance free service. Textured white and lead grey are also available at a small premium. Other BS5252 (inc BS4800) or RAL colours are available in smooth finish, however, if quantity allows, these can also be obtained in textured finish. A small premium is applicable for special colours.

Maintenance

Yeoman Rainguard Standard Aluminium Pipes require no maintenance other than periodical cleaning out.

Standard Aluminium Pipe Accessories

All components available in square (as illustrated), round and rectangular. Special sizes are readily available.

Plinth Offset 135° Projection to order.

CAST ALUMINIUM Gutters & Hoppers

Composition Design & Manufacture

Yeoman Rainguard Cast Aluminium Gutters are gravity fed die castings using LM 27 Alloy.

Shape & Dimensions

The gutters are supplied in standard 1.8m lengths.

Standard Accessories

Running outlets (round or square drop), 90° internal and external angles, 135° internal and external angles, union clips, stop ends (handed), fascia brackets, rise and fall brackets (if required), stainless steel fixing screws, silicone joint sealants, epoxy resins.

Optional Accessories

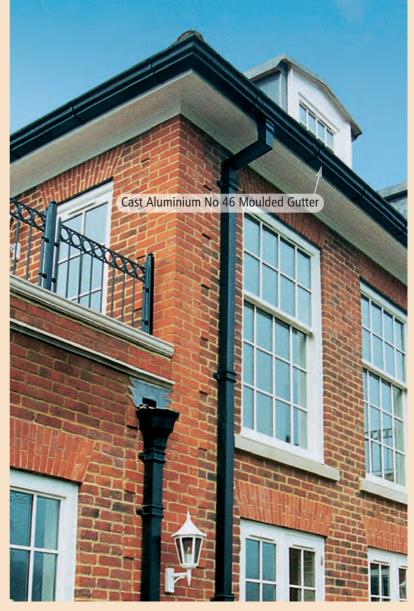

Non-standard angles made to order.

Colours & Finishes

All gutters, pipes and accessories are finished in black textured polyester powder coating to give years of maintenance free service. Textured white and lead grey are also available at a small premium. Other BS5252 (inc BS4800) or RAL colours are available in smooth finish, however, if quantity allows, these can also be obtained in textured finish. A small premium is applicable for special colours.

Maintenance

Yeoman Rainguard Cast Aluminium Gutters & Hoppers require no maintenance other than periodical cleaning out.

ALUMINIUM Fixing Instructions

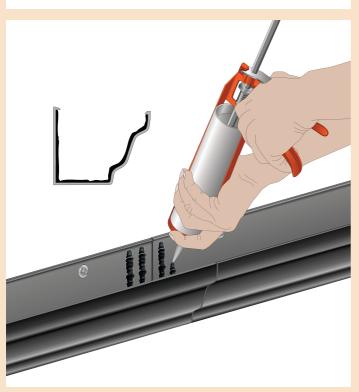

XL Aluminium Gutters

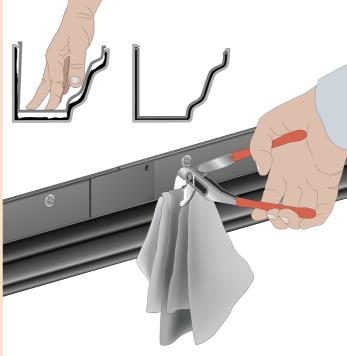

- 1. Place Gutter in position, fixing to fascia board at 500mm centres through oversize hole to allow for expansion and contraction using 32mm stainless steel screws and oversize washer.
- **2.** Allow 2mm expansion gap between lengths and components.
- **3.** Ensure all joint areas are clean, dry, dust and grease free prior to applying silicone sealant.
- **4.** Apply two generous beads of silicone sealant to each side of the joint.

- **5.** Place joint clip in position pressing down firmly until it snaps into position. Note: If roof tiles are in the way then the joint clip will need to be tilted slightly to manoeuvre into gutter.
- **6.** Using a cloth to protect the finish, press the joints into place using bent pliers.
- **7.** Re-apply additional silicone if required.
- **8.** Gutter may be cut using a fine tooth hacksaw or power saw with aluminium blade. Ensure any burr is removed with a file.
- **9.** Ensure any cut ends are coated using the touch up paint provided.
- **10.** Brackets may be used if required. Brackets must be used with the 125 x 55mm XL half round gutter. Brackets should be fixed at 900mm centres however this should be reduced if snow load is a concern.

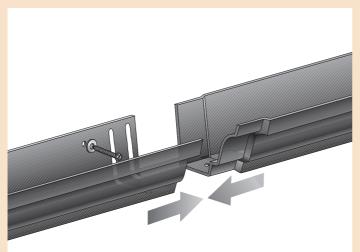

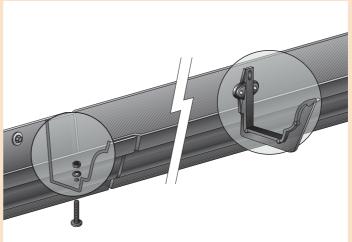

Cast Aluminium Gutters

- **1.** Fix gutter brackets at 900mm centres to give correct line and level. Use appropriate length stainless steel screw.
- **2.** Ensure all joint areas are clean, dry, dust and grease free prior to applying silicone sealant.
- **3.** Apply two generous beads of silicone sealant to joint and around bolt hole.
- **4.** Insert 25 x 5mm stainless fixing bolts from the underside of the gutter. Do not over tighten.

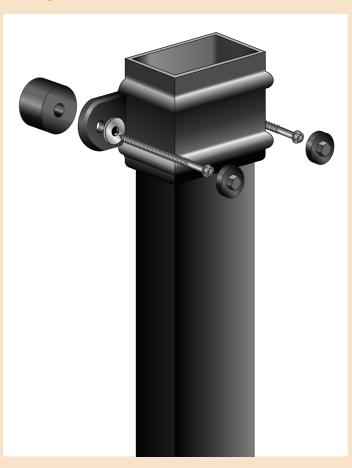

- **5.** Remove any surplus sealant from faces of gutter.
- **6.** Fix gutter to fascia board at 600mm centres through oversize hole to allow for expansion and contraction using 32mm stainless steel screws and washer.
- **7.** Gutter bolts may be touched up using touch up paint provided.
- **8.** Gutter may be cut using a fine tooth hacksaw or power saw with aluminium blade. Ensure any burr is removed with a file.
- **9.** Ensure any cut ends are coated using the touch up paint provided.

XL & Standard Aluminium Pipes

- **1.** Place rainwater pipe in correct position and mark wall through pre-drilled holes in ears of pipe.
- **2.** Drill wall using appropriate masonry bit.
- **3.** Use only stainless steel screws and place through washer provided.
- **4.** Fix through pre-drilled pipe ears using appropriate length screws and plugs to obviate pull out.
- **5.** When fixed securely, push on cover cap to conceal screw head.
- **6.** Ensure pipes are plumb and offer up next pipe or component.
- **7.** Fit in to socket leaving approx. 5mm gap for expansion and contraction.
- **8.** Joints between sections can be pointed with silicone if required.
- **9.** Bobbins are available to ensure a straight line to rainwater pipes where the building surface may be uneven.
- **10.** Pipes may be cut to length using a fine tooth hacksaw or power saw with aluminium blade. Ensure any burr is removed with a file.

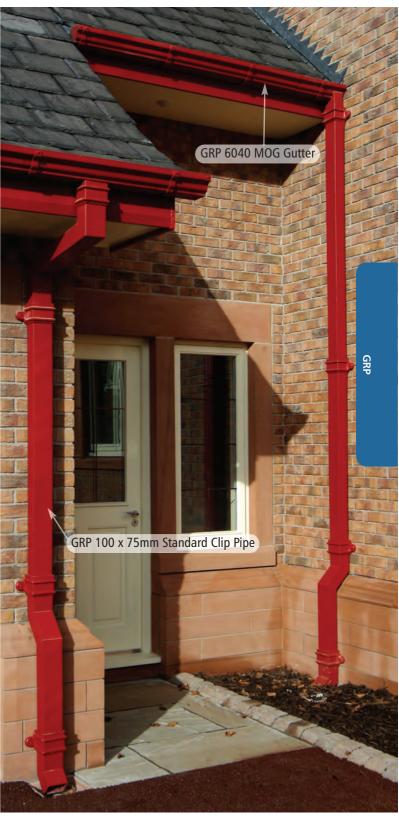

A radius GRP gutter was the aesthetically pleasing yet functional solution for these two residences.

The authentic appearance to this heritage house was maintained with a bespoke patterned GRP Gutter to match the original.

Bespoke GRP gutters were moulded with the rope decoration to be in keeping with the style of this old timber house.

GRP Gutters

Composition Design & Manufacture

Yeoman Rainguard GRP Gutters and fittings are glass fibre reinforced mouldings comprising glass fibre reinforcings in the form of laminations fully impregnated with Lloyds approved resins. Special formulations of laminate provide the desired strength and rigidity.

Shape & Dimensions

The gutters are supplied in standard lengths of 1.8m plus spigot. Other sizes and sections are available to order.

Standard Accessories

Running outlets (square or rectangular drop), 90° internal and external angles, stop ends (handed), union clips, fascia brackets, rise and fall brackets, rafter brackets, nylon gutter bolts, nuts and washers, silicone joint sealants.

Optional Accessories

Non-standard angles or special gutter configurations made to order. Purpose made motifs to suit client requirements.

Colours & Finishes

All gutters are through coloured. The standard finish is a reproduction cast iron surface in black. Our Vision range of colours is also available at a small premium (see pages 66 - 67). Other BS5252 (inc BS4800) or RAL colours are available.

Gutter Brackets

Yeoman Rainguard gutter brackets are manufactured from mild steel flat bar, which is then spun galvanised prior to the application of a polyester powder coat finish. Where it is not possible to coat brackets in a matching colour to the gutter, then brackets are supplied galvanised for the customer to apply a suitable paint finish.

Some of our brackets are manufactured from aluminium.

Gutter brackets are produced in the following types; profiled fascia bracket, profiled rafter bracket, and profiled drive-in rise and fall brackets. Client's own design available to order.

Should the location of the project be subject to severe weather conditions i.e. coastal environment then we would recommend the use of 316 stainless steel with a polyester powder coat finish. Other surface treatments are available to order.

Silicone Sealant & Gutter Bolts

The recommended silicone to be used for gutter sealing is a high modulas, reactive cure sealant conforming to ISO11600, available from Yeoman Rainguard.

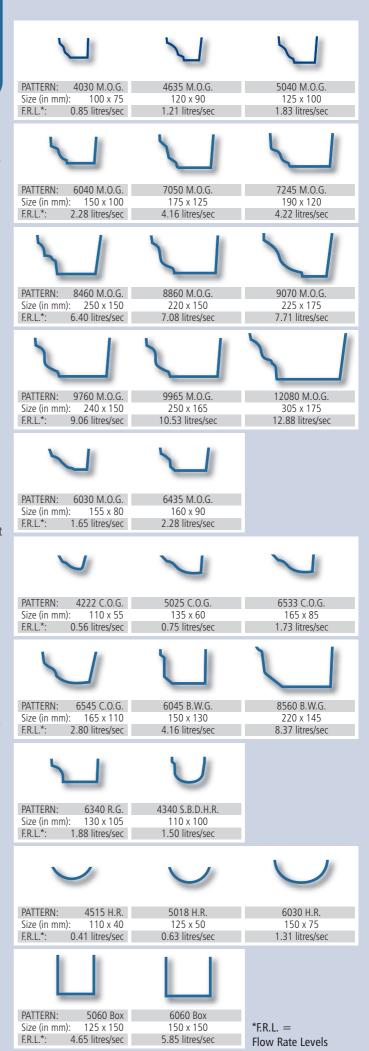

Nylon gutter bolts, nuts and washers are available for fixing gutter lengths; these are available in black or natural (for special colours a touch up paint is available on request). Nylon bolts are coloured using a dyeing process and, as such, the colour will eventually bleach out when exposed to UV light.

Maintenance

Yeoman Rainguard GRP requires no maintenance other than periodical cleaning out.

Availability

GRP gutters are made to order; please contact our sales office for accurate delivery details.

Radius Gutters

The beauty with GRP is the flexibility with shape and form. Yeoman Rainguard is able to make radius gutter in any profile and any radius, both internal and external. These can also match our aluminium profiles, we would usually supply these in 0.9m lengths.

Templates are required from the client and then moulds can be manufactured to ensure accuracy of the radius.

Special Profile

Our range is continually expanding. For example, where a special gutter profile is required, we are able to match existing items by either moulding from an original or producing a hand made pattern and mould from the client's own design.

Our technical staff are able to visit site to discuss special applications, offer advice on design and carry out a full survey where required.

Please contact our sales office for further details.

GRP Pipes

Composition Design & Manufacture

Yeoman Rainwater GRP Pipes, fittings and clips are glass fibre reinforced mouldings comprising glass fibre reinforcings in the form of laminations fully impregnated with Lloyds approved resins. Special formulations of laminate provide the desired strength and rigidity.

Shape & Dimensions

The pipes are supplied in standard length of 1.8m, 0.9m as required, all complete with socket. Standard pipes are shown opposite. Other sizes and sections are available to order.

Standard Accessories

1 part offsets, plinth offsets, side offsets, branches, bends, shoes, square to round connectors, loose sockets with spigot, loose clips.

Optional Accessories

Special bends, passovers and offsets, access plates and rodding eyes to customer requirements.

Colours & Finishes

All gutters are through coloured. The standard finish is a reproduction cast iron surface in black. Our Vision range of colours is also available at a small premium (see pages 66 - 67). Other BS5252 (inc BS4800) or RAL colours are available.

Silicone Sealant

The recommended silicone to be used for pipe sealing where required is a high modulas, reactive cure sealant conforming to ISO11600, available from Yeoman Rainguard.

Fixing screws and cover caps are available in black as standard and also a limited colour range. However we are able to provide touch up paint where special colours occur.

Maintenance

Yeoman Rainguard GRP requires no maintenance other than periodical cleaning.

Availability

GRP Hoppers

Yeoman Rainguard GRP Hoppers bring character and traditional style to any building - old or new. There are 45 standard designs available and these can be further enhanced by adding coats of arms, dates or embellishments.

The hoppers are through coloured, the standard finish is a reproduction cast iron surface in black. For other colours see pages 66-67. Should none of the standard designs meet the desired criteria, then we are able to manufacture to individual requirements or match an existing hopper by using an original to cast a mould from.

GRPFixing Instructions

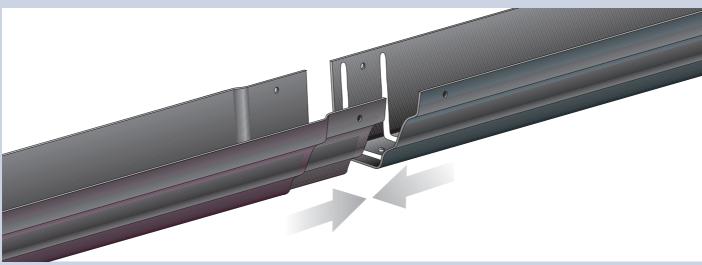

Gutters

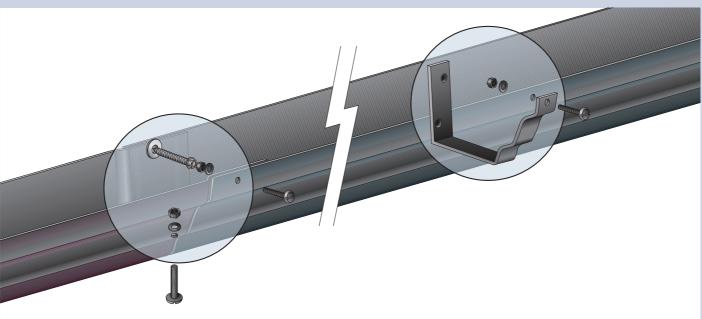

- **1.** Fix gutter brackets to give correct line and level (min. 2 no. brackets per length). Ensure fixings are adequate to obviate pull out.
- **2.** Place gutter in position ensuring correct sit into brackets.
- **3.** At joint, drill gutters through underside and also through top of front face to accept gutter bolts (holes to be 3mm oversize to allow for thermal movement).
- **4.** Ensure gutter socket and spigots are dry, clean, dust and grease free prior to applying silicone sealant.
- **5.** Apply 2 no. 6mm sealant beads between spigot and socket joint around bolt hole to ensure alignment of leading edges of gutter when joints are bolted together.

- **6.** Bolt joints together through previously drilled holes, at the same time aligning front edges. Do not over tighten.
- **7.** Drill back of gutter approx. 18mm from top at every joint and maximum 600mm centres. (Holes to be 3mm oversize to allow thermal movement).
- **8.** Secure gutter through previously drilled holes in back, using a minimum 18mm OD washer between head of fixing and gutter. Do not over tighten and cause misalignment of gutter (use packers between back of gutter and wall if necessary). Ensure fixings are adequate to obviate pull out.
- **9.** Secure gutter to bracket by bolting through hole provided at every alternate bracket.
- **10.** Remove any surplus sealant from faces of gutter.

The Yeoman Rainguard Gutter should be fixed wherever possible using the profile gutter brackets. This principle applies even when existing corbels are used.

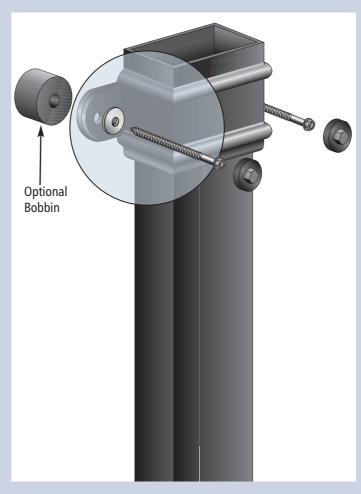

Where it is not possible to use brackets and the gutter is sat only on corbels, the gutters can be manufactured with extra strengthening, however the corbels should project far enough to support the full underside of the gutter.

Pipes

- **1.** Drill hole through ears of pipe using HSS drill.
- **2.** Place rainwater pipe in correct position and mark wall through pre-drilled holes in ears of pipe.
- **3.** Drill wall using appropriate masonry bit
- **4.** Use only stainless steel screws and place through washer provided.
- **5.** Fix through pre-drilled pipe ears using appropriate length screws and plugs to obviate pull out.
- **6.** When fixed securely push on a cover cap to conceal screw head.
- **7.** Ensure pipes are plumb and offer up next pipe or component.
- **8.** Fit in to socket leaving approx. 5mm gap for expansion and contraction.
- **9.** Joints between sections can be pointed with silicone if required.
- **10.** Bobbins are available to ensure a straight line to rainwater pipes where the building surface may be uneven.
- **11.** Pipes may be cut to length using a fine tooth hacksaw.

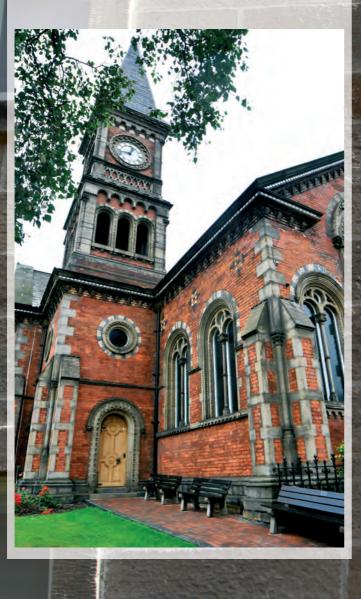

CAST IRON Rainwater Systems

Yeoman Rainguard's Cast Iron Rainwater gutters, down pipes and Soil pipe systems are strong and durable offering years of service (if maintained correctly).

Manufactured by Hargreaves, the UK's leading manufacturers of Cast Iron rainwater products, assuring the highest quality is accomplished.

With a comprehensive choice of gutter profiles and pipe sizes, Cast Iron is the perfect option for use in conservation areas as well as on listed buildings.

CAST IRON Gutters

Composition Design & Manufacture

Manufactured in grey iron and conform to BS460.

Shape & Dimensions

Supplied in standard lengths 1.83m.

Standard Accessories

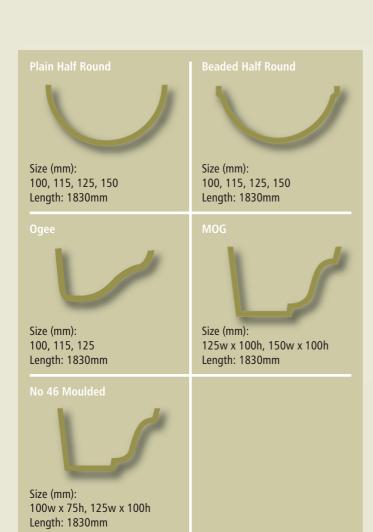

Running outlets, stop end outlets (handed), 90° external and internal angles, 135° external and internal angles, stop ends (handed), joint clips, fascia brackets, rise and fall brackets, rafter brackets, stainless steel gutter bolts, nuts and washers, silicone joint sealants.

Colours and Finishes

Delivered in grey transit coat ready for onsite painting. Painting specification available on request. We can also supply pre-finished in black at a premium. Other colours are available.

Availability

Certain of the more popular sizes are normally held in stock. Other sizes are readily available; please contact our sales office for accurate delivery details

Cast Iron Gutter Accessories (Available in all profiles)

90° Internal Angle

Silicone Joint Sealant

CAST IRON Pipes

Composition Design & Manufacture

Manufactured in grey iron and conform to BS460.

Shape & Dimensions

Supplied in standard lengths 1.83m, 1.2m, 0.9m and 0.6m.

Standard Accessories

Offsets, plinths, branches, bends, shoes, loose sockets with spigot, access pipes, stainless steel fixing screws, cover caps, wire balloons, bobbins, pipe nails.

Special Accessories

Special bends and offsets, access plates and rodding eyes available to order.

Colours & Finishes

Delivered in grey transit coat ready for onsite painting. Painting specification on Fixing Instructions (see page 42). We can also supply pre-finished in black at a premium. Other colours are available.

Availability

Certain of the more popular sizes are normally held in stock. Other sizes are readily available; please contact our sales office for accurate delivery details.

Cast Iron Pipe Accessories

All components available in round (as illustrated), square and rectangular.

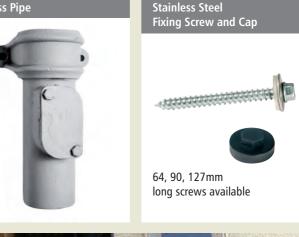

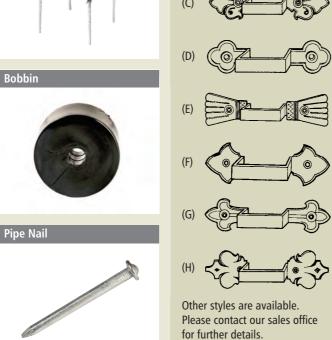

Loose Socket with Spigot

TX CAST IRON Soil Pipe Standard Accessories

Materials

Pipes and fittings are manufactured in grey cast iron which exceeds the requirements of BSEN 1561 Grade EN-JL 1020, ISO 185 Grade 15.

All push fit sockets are supplied with EPDM rubber sealing rings which are suitable for most applications but where aggressive waste liquids are to be discharged, please check with our technical department as to their suitability.

Coating

Pipes and fittings are factory coated with two pack gloss paint finish, suitable for internal and external installations. All pipes have a yellow ochre two pack internal coating.

Features

- Push fit sockets fitted with 2 EPDM rubber sealing gaskets.
- Sockets available in 3 versions: Eared, Plain and Slip eared.
- Pipes available in 1.8m lengths to match traditional systems or 3.0m lengths.
- Full range of components.

Benefits

- Ease of installation.
- No special tools or equipment required for jointing.
- Substantial labour saving due to jointing method.
- Readily available.
- Complimentary to cast iron & aluminium XL rainwater systems.
- Suitable for new projects in addition to conservation and listed buildings.

Standards and Codes of Practice

- BS416 part 2: Soil, waste and ventilating pipes and fittings.
- BS EN 681-1: Synthetic rubber gaskets.
- BS EN 12056: Codes of practice for gravity drainage systems.

CAST IRON Fixing Instructions

Gutters

- **1.** Fix gutter brackets at 600mm centres to give correct line and level. Use appropriate length stainless steel screw.
- **2.** Place gutter in position and ensure correct sit into brackets.
- **3.** Ensure all joint areas are clean, dry, dust and grease free prior to applying silicone sealant.

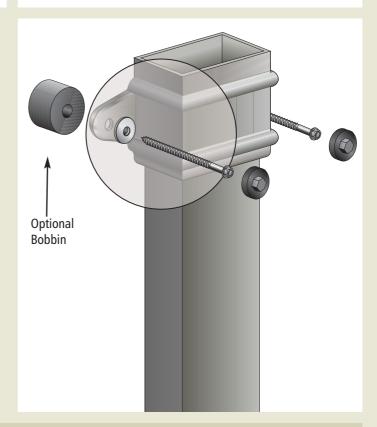

- **4.** Apply two 6mm beads of low modulas silicone to joint and around bolt hole.
- **5.** Insert 25 x 5mm stainless fixing bolts from the underside of the gutter. Do not over tighten.
- **6.** Remove any surplus sealant from faces of gutter.
- **7.** Gutter may be cut using a tungsten tipped hacksaw or powered disc cutter.
- **8.** Ensure any cut ends are painted.

Pipes

- **1.** Place rainwater pipe in correct position and mark wall through pre-drilled holes in ears of pipe.
- **2.** Drill wall using appropriate masonry bit.
- **3.** Fix through pre-drilled pipe ears using large head pipe nails, Rawl bolts or Coach screws.
- **4.** Ensure pipes are plumb and offer up next pipe or component.
- **5.** Fit in to sockets centralising by using 3 no. lead wedges.
- **6.** Joints between sections can be pointed with silicone if required.
- **7.** Bobbins are available to ensure a straight line to rainwater pipes where the building surface may be uneven.
- **8.** Pipes may be cut to length using a powered disc cutter, tungsten tipped hacksaw or pipe wheel cutter. Ensure any burr is removed with a file.
- **9.** Ensure all cut edges are painted.

Painting Specification for Gutters & Pipes

- **1.** Products supplied in a grey transit coat only.
- **2.** All pipes, gutters and accessories should be inspected for any sign of rust and cleaned using a wire brush.
- **3.** A primer coat should then be applied, followed by two coats of undercoat and one coat of gloss.
- **4.** For coastal areas, please consult your paint stockist for appropriate specification.

TX Cast Iron Soil Pipe

Pre Installation

TX sockets, both plain and eared are designed only for use with TX pipes and fittings.

Design of the soil stack should allow at least one eared socket on each fitting to enable the system to be anchored securely to the building.

Installation should proceed from the bottom to the top of the soil stack with typically a length of pipe, boss pipe or branch at the base of the

stack. The first pipe/fitting should be connected to the underground drainage system to ensure a secure base and have an eared socket fitted to the top to ensure stability and security of the pipe work before proceeding further.

Subsequent pipes/fittings installed vertically above this point should incorporate at least one eared socket. On branch arms we suggest the use of a plain socket to provide the correct aesthetical appearance. The assembled joint is designed to be a tight fit to ensure compliance with a pressure test and long life performance.

Installation

In all assembly operations it is essential for the gasket and corresponding pipe/fitting area to be fully lubricated to enable insertion of pipe/fitting in to TX socket

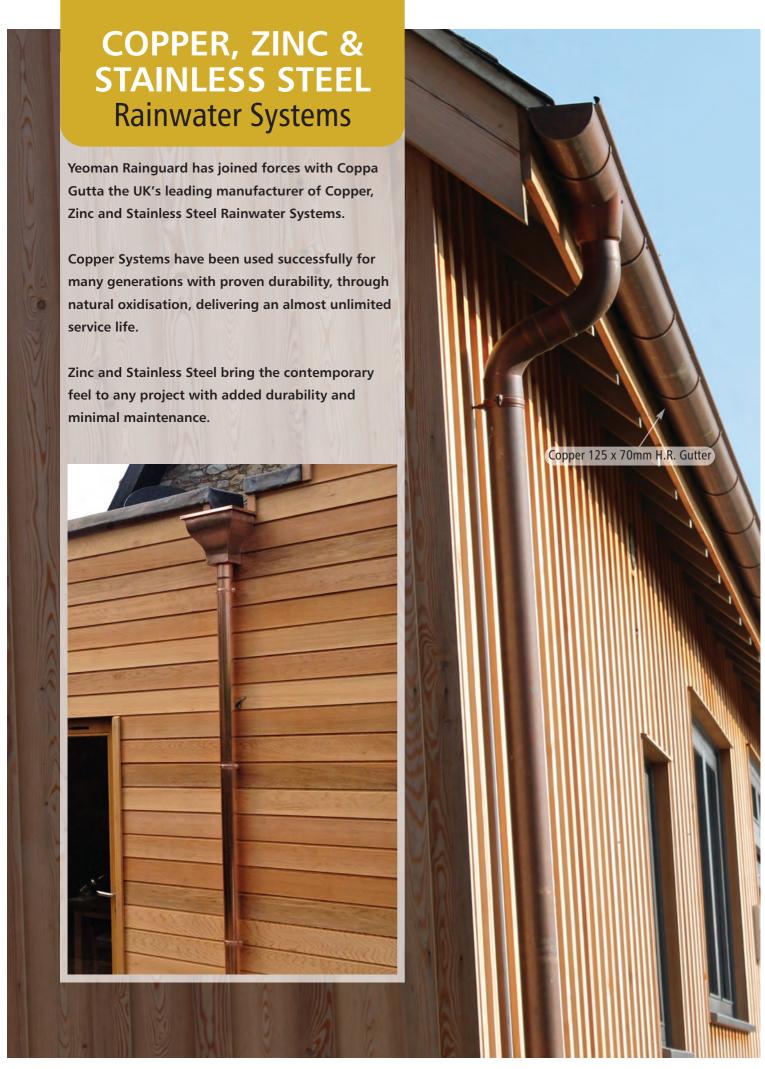

- To aid insertion of the components, immediately prior to assembling any joint, pre relaxation of the rubber gasket is recommended. Apply a small amount of lubricant to the rubber gasket/s and insert the gasket relaxing tool into the joint. Slide the relaxing tool up and down over the gasket sealing face three or four times. The gasket will now be temporarily softer and enable easier assembly of the soil stack joint. Caution: Do not over insert the relaxing tool past the rubber gasket.
- **2.** Apply a small amount of lubricant to the rubber gaskets at both ends of the push fit socket. This is necessary to ensure the insertion of pipes and fittings in to the socket.
- **3.** Push the socket over the end of the pipe after lubricating both pipe and gasket ensuring pipe end is fully inserted and abutting the central register in the socket.
- **4.** If the socket is eared, securely fix to the substrate using appropriate stainless steel fixings.
- **5.** Push the next pipe/fitting into the socket checking that it is fully inserted and abutting the central register. Repeat the above process on the remaining joints until the stack is complete.
- **6.** When cutting into an existing cast iron soil system, a slip socket with ears should be used. This has no central register and allows the socket to be slipped onto the existing pipe up to the second gasket, before placing the new fitting in position.
- **7.** Next slide the eared socket into the correct position where respective gaskets make a seal on the pipe/fitting on either side of the joint.

Cutting

Pipes and fittings should be cut using a powered disc cutter always observing the manufacturers recommendations. A hacksaw could also be used.

Care should be taken when cutting to achieve a square clean cut. Edges should be deburred, cleaned of debris and exposed surfaces re-touched.

COPPER, ZINC & STAINLESS STEEL Gutters

Composition Design & Manufacture

Manufactured in the UK from Copper, Zinc and Stainless Steel. The gutters are fixed using fascia or rafter brackets.

Shape & Dimensions

Supplied in either half round, MOG or Box section and are supplied in 2.4m lengths.

Standard Accessories

Running outlets, Swiss outlets, loose outlets, 90° external and internal angles, stop ends (handed), joint clips, fascia brackets, rafter brackets.

Finishes

Copper is available in classical bright finish, which will age naturally over time to a green patina. We are able to supply a Verdigris solution to speed up the ageing process.

Zinc gutters are available in natural finish. Stainless Steel gutters are natural.

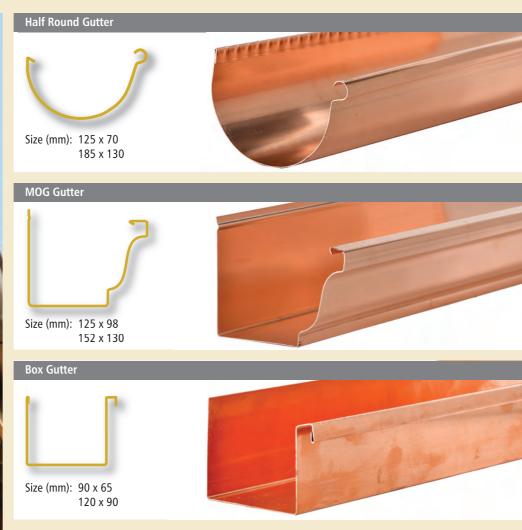

Please note: Gloves should be worn when handling the above to avoid finger prints.

Maintenance

Yeoman Rainguard Copper, Zinc & Stainless Steel requires no special maintenance other than periodical cleaning out.

COPPER, ZINC & STAINLESS STEEL Fixing Instructions

Gutters

Fascia Brackets

- **1.** Install a fascia bracket 150mm from both ends of the fascia board.
- **2.** Run a level string between the two to ensure same height.
- **3.** Fix intermediate brackets, level with the guide string, equidistance apart but at no more than 1.0 m centres. (In areas that receive heavy snowfall centres should be reduced to 500mm).

N.B. If several elevations are to be fitted with a continuous link of gutter it is advisable to fit all brackets at each corner first to establish same height all round.

Rafter Brackets

- 1. Install a rafter bracket on last roof truss at both ends determining the same height with a string as above.
- **2.** Fix intermediate brackets equidistant every other truss but no more than 1.0 m centres (500mm in heavy snowfall areas).

N.B. for installing to top of the truss, bend bracket in a vice to correct angle. Leave 1st bracket in the vice as a template for subsequent bends.

If fitting brackets to an existing roof, bend brackets to correct roof pitch, then twist through 90° and screw to side of truss.

Fitting Internal Brackets

- **1.** Mark a level line from the top rear edge of the gutter along the fascia board.
- **2.** Brackets should be fitted at 600mm centres onto the gutter sections prior to placing gutter in position.
- **3.** Line up the gutter c/w brackets with the top rear edge running along the line already marked on the fascia board.
- **4.** Screw internal brackets at each end of the gutter to the fascia board.
- **5.** Continue with the intermediate brackets.

Swiss Outlets

- **1.** Mark the desired position of the Swiss outlet on the gutter length.
- 2. Cut out the correct diameter hole with nibblers or a hole saw.
- **3.** Place Swiss outlet into position bending back tags over to hold into place.
- **4.** Drill and rivet outlet with 2 rivets to the front of the gutter.

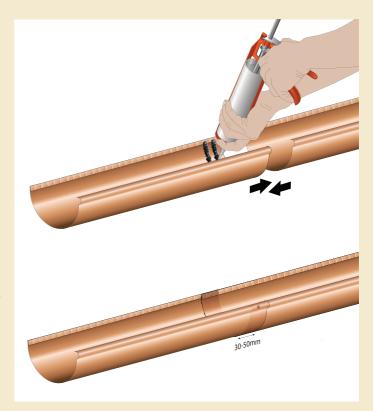

Loose Outlets

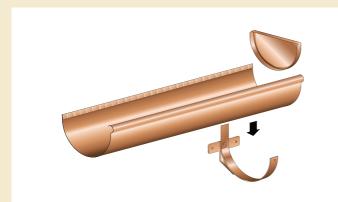

- **1.** Follow points 1 & 2 for Swiss Outlet
- **2.** Place the loose outlet into position applying sealant around the lip to make watertight.

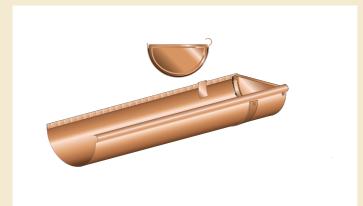

Half Round Gutter

- **1.** Pop rivet then bond stop ends in place with silicone sealant.
- **2.** Fit your first gutter in place at one end of the straight run.
- **3.** Overlap the next section of gutter about 30 50mm with the first using enough sealant to ensure a watertight joint.
- **4.** Pop rivet all joints through the overlap adding another layer of sealant inside.
- **5.** Cut the final length of gutter to size using nibblers or a hacksaw.
- **6.** When fitting corners use the same principals as detailed above.
- **7.** When joined lengths of gutter are correctly positioned secure to the brackets by bending over the back bracket tags and pop rivet through the top front of the gutter and bracket.

N.B. if using internal brackets each complete section of gutter can be screwed to the fascia.

Pipes

- **1.** Use a spirit level or plumb bob to find a vertical line.
- **2.** Fit pipe brackets 3 per length or 150mm centres. (One bracket as near to the top and one near the bottom of the pipe.)
- **3.** Downpipes can be cut to required lengths using nibblers or a hacksaw.
- **4.** Ensure the swaged ends of the pipes should be uppermost as this acts as a female joint.

QUALITY & ENVIRONMENTAL CONTROL

Yeoman Rainguard hold internationally recognised standards in both quality and environmental matters.

ISO 9001 is an accreditation which ensures that as a company we offer a high quality of both products and service to our customers, including on time and accurate delivery of materials, working with a "get it right first time" attitude.

Being independently audited at regular intervals demonstrates the commitment to quality and customer care.

ISO 14001 assures clients and employees that we continually strive to improve our environmental performance through more efficient use of resources and reduction of waste, gaining a competitive advantage which we can pass on to our customers.

HEALTH & SAFETY CONSCIOUS

As manufactures, suppliers and installers of our rainwater systems we are extremely vigilant with regards to our health and safety standards to protect both our own workers and those people working with and around us.

We proudly hold a collection of health & safety accreditations - CHAS, Constructionline and Worksafe Contractor – as recognised by SSIP, educating our employees to work to meticulous health & safety standards both on and off site.

Our directly employed and approved installers hold CSCS cards, guaranteeing they work with the consideration of other site personnel's, the public's, as well as their own, personal safety.

INSTALLING YEOMAN RAINGUARD RAINWATER SYSTEMS YOURSELF?

Please note: Complete fixing instructions can be found at the end of every material section throughout the brochure.

Safety should be the first consideration when working on any building, especially at height – We recommend you follow the guidelines provided by the HSE for work on construction sites – www.hse.gov.uk

FREQUENTLY ASKED QUESTIONS

Where do I obtain Rainguard products?

Rainguard products are available direct from us here in Leeds or through most local/national builders merchants.

How available is your range of rainwater goods?

Most items are held in stock in standard finishes so delivery should be 3-5 days. Our GRP range is handmade so can take up to 14 working days from order to delivery. For special colours, profiles and designs then please contact our sales office on 0113 279 5854 for an exact delivery date.

Can you supply aluminium systems in mill finish?

Yes we can. We do however put the aluminium guttering ranges through our treatment process first to ensure the products come to you free from extrusion oils etc.

Can aluminium products be fitted unpainted?

Yes it can. Once exposed to the elements, the aluminium will slowly oxidize to a dull grey colour. The oxidization will protect the aluminium from any further weathering.

Can I use my own joint sealant?

Whilst we cannot insist that our own brand silicone is used we can advise that comprehensive testing has taken place using Yeoman Sealant to ensure the best adhesion/water tightness available.

How are your cast iron products supplied?

Cast iron guttering and downpipes will arrive in a grey primer ready for onsite painting. Any blemishes should be spot primed prior to applying a further two under coats and one top coat of a good quality exterior paint. For coastal areas consult your local paint specialist.

We can supply the cast iron in a painted black finish as an extra.

Do you supply the GRP systems in any colour?

Yes, we manufacture most products in black, however, it is just as easy to manufacture in a colour. Choose from the BS Colour Range or RAL Colour range. A small premium may apply for powder coating brackets if applicable.

Is a radius gutter available in your GRP range?

GRP guttering is perfect for radius gutters as we can make moulds to suit any radius. These are usually supplied in 1.0m lengths and radius template would be required.

What would you recommend for matching and replacing an existing cast iron gutter?

If we are provided with an original gutter we can sandblast this and then take a mould from it. We can then produce lengths of GRP gutter that will be exactly the same as before, down to each little blemish.

How often do Yeoman Rainguard rainwater systems need re-painting?

This varies from system to system and depends on the environment they are used in:-

Our aluminium rainwater systems undergo a four part treatment process prior to powder coating, followed by a two stage inspection before the goods are despatched. It then undergoes a rigorous salt water testing process.

These tests indicate an anticipated life span before refinishing of 25 years plus for inland locations and approximately 15 years in coastal environments.

Cast Iron gutters & downpipes, generally speaking, and depending on location, will need repainting every 3 to 5 years.

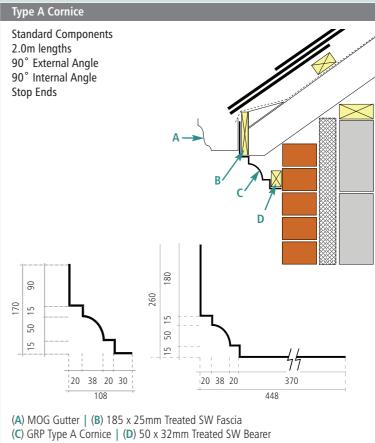

If the painted finish is supplied this should last 10 years in normal conditions.

Yeoman Rainguard GRP products are through coloured being UV stable, and as such, will not fade in sunlight like some uPVC products. This stability gives the product a life of 25 years before re painting is necessary. This may be reduced in coastal environments.

ANTICLIMB

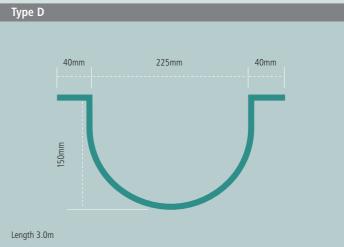

Yeoman Anticlimb is manufactured from GRP which is lightweight and virtually maintenance free.

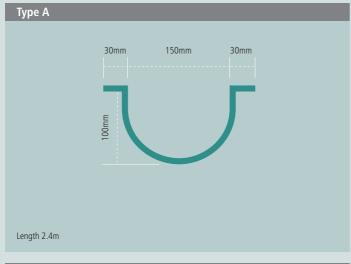

The system fits over existing downpipes, fully encasing them, thus making climbing pipes virtually impossible.

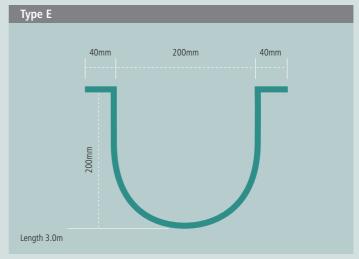

It can be manufactured in any colour and, as the material is through coloured, no routine painting is necessary.

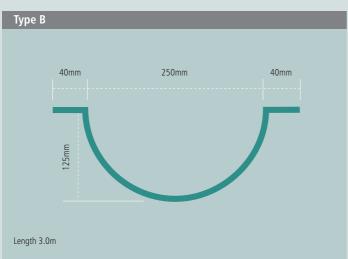

Detailed below are our standard profiles, however we can manufacture to individual requirements.

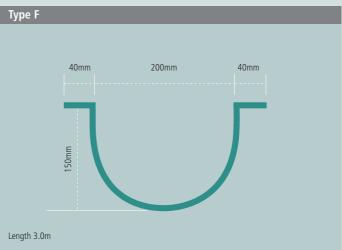

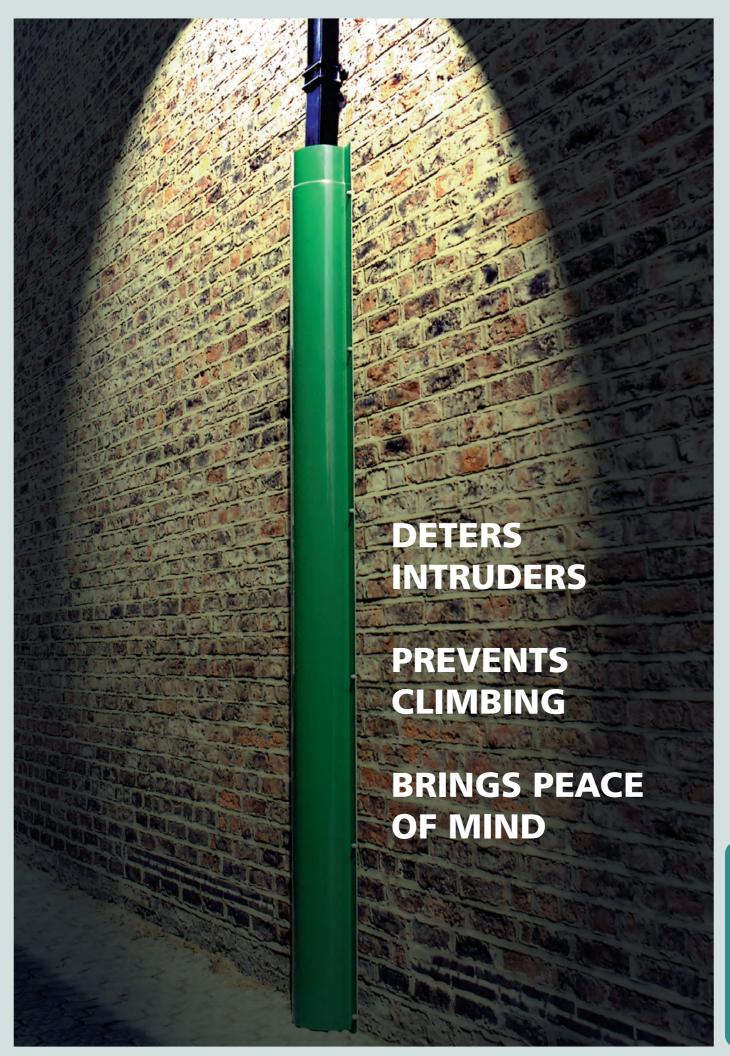

TESTIMONIALS

"We were delighted with the quality of products and prompt service we received from Yeoman Rainguard. Its specialist skills were very impressive and we were kept advised of progress at every stage of the job".

Trevor Parker,

Leeds Methodist Mission Property and Conference Manager.

"The rainwater systems look perfect on the finished property and we are very pleased with the quality of products and service that Yeoman Rainguard gave us."

Mrs Burns, Watermead Homes.

Yeoman Rainguard XL Aluminium Gutters & Downpipes in black on multi million pound property in Virginia Water.

"The quality and authentic, traditional feel to Yeoman Rainguard Rainwater Systems reflect the quality of products and workmanship that Persimmon Homes have put into this prestigious development." **Andrew Clarke**, Persimmon Homes.

Yeoman Rainguard XL Aluminium, Gutters, Downpipes & GRP special fabricated fascia in grey, Birch Hill Gardens development

"The Copper rainwater system proved simple enough to fit and the staff at Rainguard were happy to answer any queries we had. We are very pleased with the result."

Nicola Corrigan, Lynnic Associates.

Copper Gutters & Downpipes from Yeoman Rainguard on a new build, part of a 7 unit development at Chesterfield by Lynnic Associates.

"Yeoman Rainguard products ticked all the boxes for us on quality, style and ease of installation".

Tony Robinson of Mulbrand Ltd.

XL Aluminium Gutters & Downpipes with Plain Cast Aluminium Hoppers in anthracite grey, luxury new build.

"We are very pleased with the rainwater systems provided by Yeoman Rainguard and believe they fit in perfectly with the characteristics of the house."

David Barratt, owner, Haven Hall.

White Yeoman Rainguard GRP Gutters, Downpipes & Hoppers on Haven Hall Hotel, Isle of Wight.

COLOUR OPTIONS

Colour can bring any project to life

Yeoman Rainguard have endeavoured to develop a colour palette in line with today's market demands. Most are readily available within just a few days with a choice of smooth or textured depending on material.

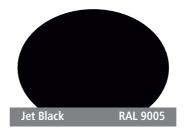

As well as those colours detailed we are able to offer any BS5252 (inc BS4800) colour as well as the RAL colour range.

We can also colour match from other colour ranges too.

Should you need any additional information regarding colour or finish then please do not hesitate to contact our Sales Office on 0113 279 5854.
